

STROBE Statement—Checklist of items that should be included in reports of *cohort studies*

	Item No	Recommendation
Title and abstract	1	(a) Indicate the study’s design with a commonly used term in the title or the abstract Comparison of Cardiac Surgery Mortality Reports Using Administrative Versus Clinical Data Sources (b) Provide in the abstract an informative and balanced summary of what was done and what was found Abstract on page 2
Introduction		
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported Page 4
Objectives	3	State specific objectives, including any prespecified hypotheses Page 5
Methods		
Study design	4	Present key elements of study design early in the paper Pages 5-6
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection Page 5
Participants	6	(a) Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up Pages 5-6 (b) For matched studies, give matching criteria and number of exposed and unexposed
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable Pages 6-7
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group Pages 5-7
Bias	9	Describe any efforts to address potential sources of bias Prospectively collected clinical data were obtained for the cardiac surgery patients
Study size	10	Explain how the study size was arrived at Page 8: All eligible patients were included in the study
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why Pages 6-7
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding Pages 6-7 (b) Describe any methods used to examine subgroups and interactions Pages 6-7 (c) Explain how missing data were addressed Complete cases were examined (d) If applicable, explain how loss to follow-up was addressed Follow-up was available on all patients in the cohort (e) Describe any sensitivity analyses
Results		
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study,

		completing follow-up, and analysed Page 8
		(b) Give reasons for non-participation at each stage Page 8
		(c) Consider use of a flow diagram
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders Pages 7-8 (b) Indicate number of participants with missing data for each variable of interest Pages 7-8 (c) Summarise follow-up time (eg, average and total amount) Page 6: Follow-up was 30 days
Outcome data	15*	Report numbers of outcome events or summary measures over time Reported on Page 10
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included Reported on Page 10 (b) Report category boundaries when continuous variables were categorized Not applicable (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period Absolute rates are reported
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses
Discussion		
Key results	18	Summarise key results with reference to study objectives Page 15
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias Pages 17-18
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence Page 18
Generalisability	21	Discuss the generalisability (external validity) of the study results Pages 17-18
Other information		
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based Page 22

*Give information separately for exposed and unexposed groups.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at <http://www.plosmedicine.org/>, Annals of Internal Medicine at <http://www.annals.org/>, and Epidemiology at <http://www.epidem.com/>). Information on the STROBE Initiative is available at <http://www.strobe-statement.org>.
