

Supplemental Material

Section 1. Data sources used for this study.	2
Section 2. Administrative definition used to define the covariates.	6
Section 3. Coding definitions used to exclude patients with potential appropriate indications for benzodiazepine, antipsychotic, or gastric acid suppressant medication.....	8
Section 4. Prescription medication names and Drug Identification Numbers (DINs) used to define the three medication groups of interest (antipsychotics, benzodiazepines and gastric acid suppressants).....	10
Section 5. Administrative data definitions used to define fall or fracture.	60
Section 6. Cohort description for patients who were dispensed an antipsychotic or a benzodiazepine during the study period.....	61

Section 1. Data sources used for this study.

1. Cerner's Electronic Medical Record System

Cerner's electronic medical record system is shared across London's three hospitals. It contains information about all patient hospitalizations (visits) and is continually updated with events like registration, admission, laboratory results, physician orders, medication administration, and electronic medication reconciliation completion. CERNER data was used to identify eligible patient hospitalizations, to flag inpatients who were prescribed a medication of interest during their hospital stay, and to identify the type of service (medical, surgical, geriatric, other) a patient received during hospitalization.

2. Ontario Drug Benefit Database

This database contains prescription medication data for all outpatient medications dispensed as part of the Ontario Drug Benefit Program, which provides prescription drug coverage to all Ontario residents over the age of 65. Each medication is coded with a unique Drug Identification Number (DIN) and each record represents a drug claim (i.e. a dispensed prescription) paid for by the Ontario Ministry of Health and Long Term Care. This database is >99% accurate compared to manual prescription review.(1) Main data elements include: DIN (drug identifier), quantity, cost, patient, pharmacy and physician identifiers, date prescription was dispensed and a long-term care indicator. We used ODB to exclude patients with baseline use of relevant medications, to define our primary process outcome, and to measure patient characteristics such as polypharmacy.

3. Canadian Institute for Health Information (CIHI) Discharge Abstract Database and Same-Day Surgery Database

These databases store demographic, diagnostic, and procedural variables for all acute hospital admissions and outpatient surgeries in Ontario. Trained personnel extract information from patient records using ICD-10 codes and Canadian Coding for Health Interventions codes to create records for each patient encounter. Previous quality assessments have demonstrated good accuracy and completeness, with reabstraction studies showing >80% agreement with the top 50 main diagnosis codes when compared with reabstracted medical records.(2) We used DAD and SDS to identify eligible and ineligible discharge episodes, to define our primary clinical outcome, and to measure a variety of patient characteristics.

4. Ontario Health Insurance Plan (OHIP) Claims History Database

All physicians treating patients in Ontario are reimbursed by OHIP on a fee-for-service basis, and these claims are paid out by OHIP are contained in the OHIP database. Fee-for-service payments have good accuracy and completeness.(3) Information collected in the claims include patient and physician identifiers (e.g. physician number and specialty), fee codes for services provided, associated diagnoses and the date service was provided. We used OHIP to exclude identify eligible and ineligible discharge episodes, to define our primary clinical outcome, and to measure patient characteristics such as prior medical conditions.

5. Registered Persons Database

The RPDB provides basic demographic information (such as age, sex, postal code of residence, and date of death for deceased individuals) for all Ontario citizens. RPDB is enriched using other datasets also held by ICES. We used RPDB to apply inclusion and exclusion criteria such as restricting the age of patient hospitalizations, and to measure patient characteristics such as age, neighbourhood income quintile and sex.

6. National Ambulatory Care Reporting System (NACRS)

NACRS captures information on patient visits to hospitals and community-based ambulatory care services. These services include visits to the ED (Emergency Department), day surgeries, and outpatient clinics. Demographic information as well as clinical, administrative, financial, and service-specific data are collected into the database.⁽⁴⁾ We used NACRS to identify eligible and ineligible discharge episodes, to define our primary clinical outcome, and to measure inpatient admissions from the ED as a patient characteristic.

8. Corporate Provider Database (CPDB)

The CPDB contains files maintained by the MOHLTC Provider Services branch with information on all physicians in the province who are funded by the Ministry. ICES receives information on demographics, specialty and practice location of physicians.

7. ICES Physician database (IPDB)

Data on all Ontario physicians by fiscal-year is contained within IPDB. Data contained in the IPDB includes physician demographics (gender, sex), specialty (functional and certified), location, and measures of physician activity (billings, workload, types or services provided). This data can be used for tasks including physician profiling, predicting physician behaviour, and measuring physician supply.

8. The Drug Information Database

This file is housed at ICES and contains a near exhaustive list of DINs (Drug Identification Number) used in Canada from 1990 onwards. This file is supplied by IQVIA Solutions Canada Inc and includes product names, subclass information, PCG codes, drug strength, route of administration and first and last dispensing dates from ODB. We used this file to create a druglist to apply as exclusion criteria and to use in exposure and outcome ascertainment.

9. Institution Information System (INST)

INST is a series of datasets that contain information about Ontario health care institutions funded by the MOHLTC. We used INST to exclude patient hospitalizations that were not discharged from our hospitals of interest.

10. Ontario Hypertension dataset (HYPER)

HYPER is an ICES-derived cohort which captures prevalent and incident cases of patients with hypertension in Ontario from 1991 onwards. ICES-derived cohorts are datasets, not disease registries, which have been developed in-house to identify individuals with specific diseases. Validation studies for these cohorts usually involve medical chart reviews, producing sensitivity, specificity, positive

(PPV) and negative predictive values (NPV). For the HYPER database cases of hypertension are identified with 72% sensitivity, 95% specificity, an 87% PPV and an 88% NPV.(5) We used HYPER to measure hypertension as a patient characteristic.

11. Ontario Chronic Obstructive Pulmonary Disease dataset (COPD)

COPD is another ICES-derived cohort and captures prevalent and incident cases of patients in Ontario with Chronic Obstructive Pulmonary Disease (COPD) from 1991 onwards. The COPD sensitive cohort has an 85% sensitivity and 78.4% specificity, and the COPD specific cohort has a sensitivity of 57.5% and a specificity of 95.4%.(6) We used the COPD dataset to measure COPD as a patient characteristic.

12. Ontario Rheumatoid Arthritis dataset (ORAD)

Prevalent and incident cases of patients >15 years old in Ontario with rheumatoid arthritis are identified in the ICES-derived dataset ORAD. Cases from 1991 onwards are captured in the dataset, and the dataset has a sensitivity of 78%, a specificity of 100%, a PPV of 78% and an NPV of 100%.(7) We used ORAD to measure arthritis as a patient characteristic.

13. Ontario Diabetes dataset (ODD)

ODD is another ICES-derived dataset, and it captures prevalent and incident cases of patients in Ontario with diabetes from 1991 onwards. Specifically, the dataset is made up of three cohorts- children/youth (<=18 years old), a sensitive cohort (19+) and a specific cohort (19+) with the case definitions being slightly different for each. The validation values for the children/youth cohort are as follows: 82.8% sensitivity, 98.9% specificity. The sensitive cohort (19+) has a sensitivity of 90.0%, a specificity of 97.7% and a PPV of 82.6% while the specific cohort (19+) has a sensitivity of 79.9%, a specificity of 99.1% and a PPV of 91.4%.(8) We used ODD to measure diabetes as a patient characteristic.

Section 5. Administrative data definitions used to define fall or fracture.

	Data sources	Codes
Fall*	NACRS or CIHI-DAD	ICD 10 W00-W19
Any Fracture**	NACRS or CIHI-DAD or OHIP	<p><i>Hip</i> (ICD 10 S720, S721; CCI 1VA73, 1VC73, 1VA74, 1VA53, 1VC74, 1VA80)</p> <p><i>Forearm</i> (ICD 10 S52; CCI 1TV73, 1TV74, 1TV03; OHIP F014, F022, F023, F025, F026, F028, F030, F032, F033, F046, F024, F027, F031, Z203)</p> <p><i>Humerus</i> (ICD 10 S422, S423, S424)</p> <p><i>Vertebral</i> (S220, S221, S320, T080, T081)</p> <p><i>Femur</i> (ICD 10 S723; CCI 1VC73, 1VC74, 1VC03, 1VC80; OHIP F095, F096, F097, Z211)</p> <p><i>Pelvis</i> (ICD 10 S321, S322, S324, S323, S325, S327, S328)</p> <p><i>Ankle</i> (ICD 10 S825, S826, S827, S828, S829)</p> <p><i>Patella</i> (ICD 10 S820)</p> <p><i>Tibia/Fibula</i> (ICD 10 S821, S822, S823, S824)</p> <p><i>Ribs/sternum</i> (ICD 10 S222, S223, S224)</p> <p><i>Trunk</i> (ICD 10 S228, S29)</p> <p><i>Scapula</i> (ICD 10 S421, S29)</p> <p><i>Clavicle</i> (ICD 10 S420)</p> <p><i>Other</i> (ICD 10 M844, M843)</p>

*Using medical chart abstraction as the reference standard, PPV for ICD 10 codes for falls in NACRS is 91.4% (email communication, Dr Lisa-Ann Fraser, June 2015).

**PPV for the coding combinations for fractures ranges between 0.81-0.96 depending on fracture site. Hip/femur fracture has an estimated PPV of 0.83¹.

Section 6. Cohort description for patients who were dispensed an antipsychotic or a benzodiazepine during the study period.

	Before (n=1,533)	After (n=3,707)	Standardized difference
Demographics			
Age (Median (IQR))	75 (69-82)	74 (69-81)	2%
Male sex	908 (59.2%)	2,144 (57.8%)	3%
Lowest income quintile	269 (17.5%)	758 (20.4%)	7%
Highest income quintile	358 (23.4%)	734 (19.8%)	9%
Long Term Care resident	22 (1.4%)	40 (1.1%)	3%
Comorbidities			
Charlson Comorbidity score (Median (IQR))	0 (0-1)	0 (0-2)	9%
Chronic Obstructive Pulmonary Disease	116 (7.6%)	293 (7.9%)	1%
Diabetes	116 (7.6%)	225 (6.1%)	6%
Hypertension	185 (12.1%)	344 (9.3%)	9%
Ischemic heart disease	331 (21.6%)	606 (16.3%)	13%
Liver disease	9 (0.6%)	72 (1.9%)	12%
Inflammatory bowel disease	158 (10.3%)	453 (12.2%)	6%
Renal disease	92 (6.0%)	367 (9.9%)	10%
Arthritis	8 (0.5%)	23 (0.6%)	1%
Stroke	50 (3.3%)	129 (3.5%)	1%
Cerebrovascular disease	62 (4.0%)	159 (4.3%)	1%
Dementia	<=5 (<=0.3%)	25 (0.7%)	6%
Congestive heart failure	249 (16.2%)	673 (18.2%)	5%
Prior healthcare utilization			
Outpatient Internal medicine specialist visits in previous year (Median (IQR))	0 (0-1)	0 (0-1)	19%
Primary care visits in previous year (Median (IQR))	2 (1-6)	3 (1-8)	9%
Medication utilization			
Number of medications is previous year (Median (IQR))	7 (4-11)	8 (4-11)	6%
Polypharmacy at admission (≥ 10 different daily prescription medications in the last year)	539 (35.2%)	1,344 (36.3%)	2%

IQR: Interquartile Range
